

# *Giving Hand*

Linking surplus food with those in need.

## Introduction

Giving Hand is platform connecting food providers with non-profit centers and factories to reduce waste and support vulnerable communities efficiently.

## Objective

The objective is to reduce food waste by connecting providers with nonprofits and factories through smart, efficient digital donation platform.

## Methodology

- Researched food waste issues & stakeholder needs
- Defined roles: Providers, Non-profits, Factories, Admins
- Designed a role-based digital platform
- Built with React & Supabase
- Added donation tickets, approvals & tracking

## System Design / Implementation

- Role-based system for Donors, Non-profits, Factories & Admins
- Custom access & features per user type
- Built with React (Frontend)
- Supabase for Auth & Database
- Real-time updates for donation flow

## Conclusion

Giving Hand showed potential in reducing food waste by redistributing food to nonprofits and factories, showcasing digital solutions' social impact.
